1. More units sold, less revenue

In 2014, units sold rose by **9.9%**, but revenue fell by 17.6%, from **$165.25M** to **$136.11M**. Average revenue per unit dropped from **$161** to **$121**.

My recommendation: I'd start with the Government segment, where revenue fell by **$36.4M**. Amarilla and VTT accounted for most of that drop. I'd compare units sold and revenue per unit for those two products in each country to see what changed.

2. VTT and Amarilla account for most of the gross profit

Together, VTT and Amarilla accounted for about **75%** of total gross profit across both years. VTT had the largest revenue drop of any product in 2014, down **$25.6M**. About **$15M** of that drop came from America and Canada.

My recommendation: I'd focus the VTT sales review on those two markets first and track units sold and gross profit each month.

3. The 7% discount band brought in more gross profit than the 10% band

The 10% discount band recorded the most units sold, at **748,080**. The 7% band brought in **$75.34M** in gross profit, compared with $**58.15M** for the 10% band.

My recommendation: I'd test both discounts on the same product in the same market. I'd use the 10% discount only if the extra units sold are enough to increase total gross profit.
